

Assessment Event 1 Tasks

Scenario

You are working for a small web design agency who are creating a website for the Rock Wallaby Mountain Bike Club. Your boss has let you know that it is ready to go and you will need to upload the website to their new web hosts server. He has also mentioned that you will be required to source a suitable FTP client to use for the task and has specified that it is against company policy to use FileZilla.

Tasks

Read the scenario presented above and follow the steps listed below.

1. Using the [rwmbc.zip](#) file unpack it to a folder on your computer. For clarity at this point you should:
 - a. download the zipped file
 - b. extract the files into a folder on your computer
 - c. make any necessary changes to ensure the site is functional and that the links are working for all pages
2. Download an FTP client, not FileZilla, and investigate it for its usefulness and install it on your computer. A full list can be found here: http://en.wikipedia.org/wiki/Comparison_of_FTP_client_software
3. Create a connection to the webserver. Refer to the FTP Guide for the TAFEnow web server. This is available from the Additional Resources in the Learning and Content section of this unit.

You may already have an account for web hosting from the activities in the unit notes or from another unit. If you don't have an account, email your facilitator at it.tafenow@tafensw.edu.au and request that a web hosting account be created for you. Include the subject "Web server account request" in the email subject.
4. Transfer the Rock Wallaby site to the server, you must
 - a. load the site into a folder named <yourname>/ICTWEB403
 - b. check the site is operational once loaded

Note that the URL for your site is detailed within the FTP Guide.
5. Download the file [terms.docx](#) and open it.
 - c. Take a screen capture of the FTP client you are using showing the site having been transferred as required above and paste it into the terms document.
 - d. Insert the URL of the tested site and put your name on the bottom line.
 - e. Save the file for submission e.g. yourname_event1.
6. Load this file to the <yourname>/ICTWEB403 folder on the web server.

Note you must also submit this file via the TAFEnow Assessment upload space for this unit.

7. Site upload - check that:

- The server now has all 45 files, 4 folders and 1 sub folder contained within the RWMBC.zip file
- The files are in the correct folder including your name (with no spaces in folder name)
- Your file for submission includes evidence you tested in a web browser (in yourname_event1.)
- Your file is loaded to the correct folder on the web server
