

FTP to the TAFEnow web server

FTP details for your account will be provided and will not be the same as your TAFEnow login and password. Your account will only be created on receipt of a request. If you have not been provided with your username and password [request a web hosting account now](#) making sure that you include your name in the subject of the email.

The following are the details required to connect to the TAFEnow web hosting server:

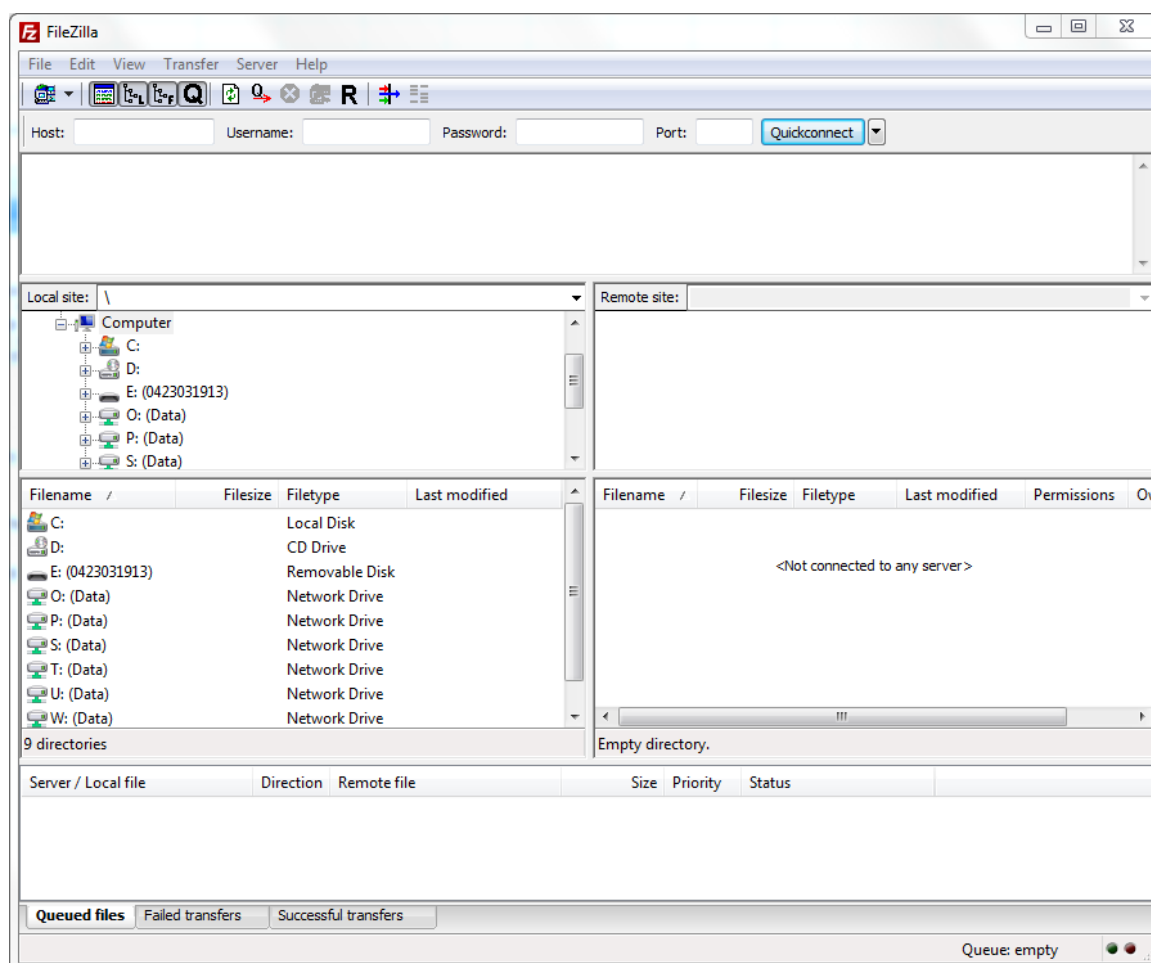

- Host: tafenowweb.net
- Username: a1234567 Note this is a **sample only** you will be provided with your username
- Password: Password Note this is a **sample only** you will be provided with your password

Your website address (or URL) will be similar to the following <http://a1234567.tafenowweb.net>

Your address will have your username within the URL. This example website address is a **sample only** using the sample user name previously provided. You need to replace that part of the URL with your actual user name to access your site.

If you have not done so already download and install [FileZilla Client](#)

The first time you run it FileZilla will display this window:

Student Guide

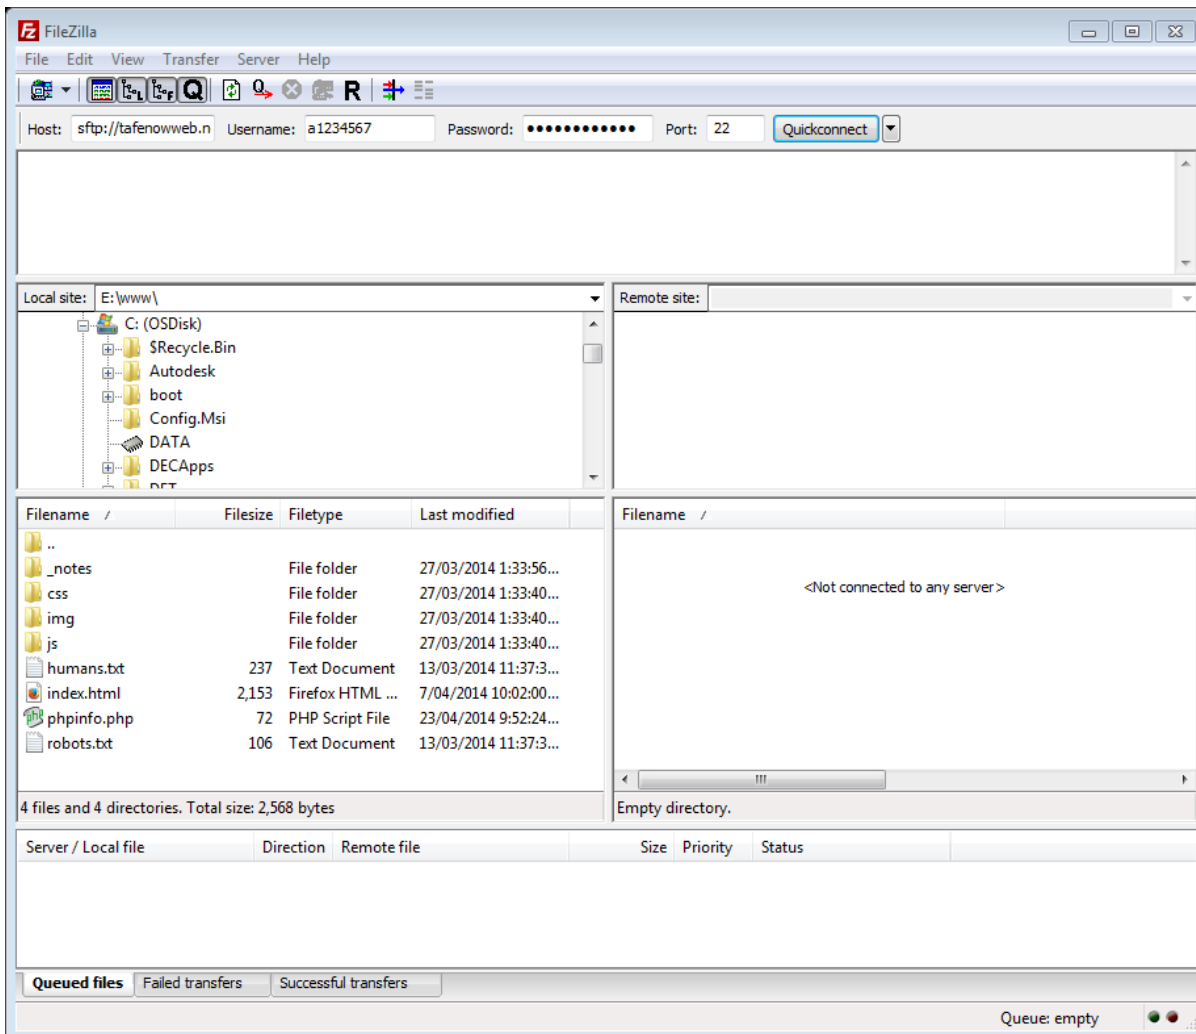

your education
whenever, wherever

You need to complete the details to create the connection. These are entered at the top of the screen, directly below the toolbar.

You must connect via sftp for this server. To do this you need to enter **sftp://tafenowweb.net** as the host and connect using port **22**. Also enter your username and password, as per details provided above, and click Quickconnect.

If the dialog below displays you need to click OK to proceed:

Student Guide

your education
whenever, wherever

The pane on the left reflects the Local site (Computer); the pane on the right reflects the Remote site: (Webserver).

Copy the html code below into a new document (e.g. in Notepad) and save the file with the following name "index.html".

```
<!DOCTYPE html PUBLIC "-//W3C//DTD XHTML 1.0 Transitional//EN"
"http://www.w3.org/TR/xhtml1/DTD/xhtml1-transitional.dtd">
<html xmlns="http://www.w3.org/1999/xhtml">

<head>
<meta http-equiv="Content-Type" content="text/html; charset=utf-8" />
<title>New Site</title>
</head>

<body>Welcome to my new Site!</body>

</html>
```

From within FileZilla navigate in the left pane (Local Site) to the file you just created called "index.html"

On the right pane (Remote Site), you will need to save your file in the "public_html" folder so it is visible on the web.

Student Guide

your education
whenever, wherever

Drag and drop "index.html" from the left pane into the right pane. Overwrite if a file already exists.

Congratulations! You have successfully uploaded a file to a web server. You can view your site by placing the host name into a web browser.

This example below shows the URL with the sample username as detailed on page 1 of this document. Be sure to enter your user name into the URL to access your site:

Welcome to my new Site!
